

## WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-001

Waste Site Code(s)/Subsite Code(s):

200-E-250-PL and 2704-C-WS-1

Reclassification Category: Interim ☐ Final ☒Reclassification Status: Closed Out ☐ No Action ☐ Rejected ☒RCRA Postclosure ☐ Consolidated ☐ None ☐Approvals Needed: DOE ☒ Ecology ☒ EPA ☐**Description of current waste site condition:**

(What is the current physical state of the site? What activities have been performed?)

The 2704-C-WS-1 waste site consists of a quench tank that formerly received non-contaminated radiator steam condensate from the immediately adjacent 2704-C Office Building and Gatehouse. The 200-E-250-PL waste site consists of the underground 2.5-cm (1-in.) diameter carbon steel line connection between the building and quench tank. Overflow from the quench tank formerly discharged into the sanitary sewer servicing the 2704-C building; this pipeline has not been identified as a waste site.

The top of the quench tank was formerly located at surface grade. The 2704-C building was demolished in 1998; it is not known if the tank and/or pipeline were removed at that time, but no surface features of the tank are visible at the location.

**Basis for reclassification:**

(How does the site meet the reclassification status?)

As discussed in the 200-EA-1 scoping workshop on January 25, 2017, the 250-E-250-PL and 2704-C-WS-1 waste sites only received radiator steam condensate from a non-radiological facility, and are therefore not associated with any hazardous waste disposal.

## WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-001

Waste Site Code(s)/Subsite Code(s):

200-E-250-PL and 2704-C-WS-1

Project Manager comments:

### Waste Site Controls:

Engineered Controls: ☐ Yes ☒ No Institutional Controls: ☐ Yes ☒ No O&M Requirements: ☐ Yes ☒ No

If any of the Waste Site Controls are checked Yes, specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents:
